

Gap Analysis and Prioritization Matrix

Hospital Management System Improvement Project

Ridmi Jayawardhana

Gap Analysis Table

Area / Process	Current State (As-Is)	Desired Future State (To-Be)	Gap Identified	Impact
Patient Records	Paper-based / fragmented digital files	Centralized Electronic Medical Record (EMR) system	Lack of centralized digital records	High
Communication Between Departments	Manual communication (phone, paper notes)	Real-time digital communication system	Delayed and inefficient communication	High
Patient Registration	Manual registration at the admissions desk	Automated digital registration system	Slow and error-prone process	High
Appointment Scheduling	Phone-based/manual booking	Online integrated scheduling system	No real-time availability tracking	Medium
Pharmacy Management	Separate, disconnected records	Integrated prescription & pharmacy system	Lack of real-time prescription tracking	High
Data Accessibility	Limited access per department	Cross-department real-time access	Data silos between departments	High
Reporting	Manual report generation	Automated dashboards and analytics	Time-consuming reporting process	Medium

Requirements Prioritization Matrix

(Using **High** / **Medium** / **Low** priority based on impact, feasibility, and urgency)

Requirement	Business Impact	Cost	Feasibility	Priority Level
Electronic Medical Records (EMR) System	High	High	Medium	High
Real-time Department Communication System	High	Medium	High	High
Digital Patient Registration System	High	Medium	High	High
Appointment Scheduling System	Medium	Low	High	Medium
Pharmacy Integration System	High	Medium	Medium	High
Automated Reporting Dashboard	Medium	Medium	High	Medium
Patient Data Access Control System	High	Medium	Medium	High
Advanced Analytics Module	Low	High	Low	Low

The End
